The format 1 could be used for documenting information about Millets, Cereals, Oil Seeds, Commercial crops, Tuber Crops, Vegetables, Legumes, Aromatic crops etc. The Column No. 9 'other details' vary with the nature of crops. For measuring local status, there need to identify a particular year - significant changes in ecology occurred - and compare the status as past and present (past = before the particular incident). We have to list out all possible features of a crop/plant and give short forms of the same. If relevant, cultivation practices, propagation techniques, usage etc can be included in the column 8, in associated TK.
